

## Tree of the Month - June

# *Cercidiphyllum japonicum* (Katsura)

*Cercidiphyllum japonicum* (Katsura) can grow to more than 30m in its native Japan, however in Britain plants rarely reach more than 15m. It has a rounded conical crown, and heart shaped leaves in opposite pairs. It is available from Deepdale Trees as a standard tree and also as a multistem upto 7m high.

*Cercidiphyllum* is another plant which gives interest all year round, with its constantly changing colour displays. Its leaves flush out pink in spring, gradually turning to a lush green in summer. Autumn brings brilliant displays of orange yellow and red, accompanied by the smell of candy floss drifting gently in the breeze.

20/25 standard

6-7m multistem
