

Acer ginnala 4.5-5.0m CG

Acer ginnala originates from Northern China and Japan, it's common name Amur Maple derives from the name of the river that divides China and Russia.

Acer ginnala is a small, slow growing tree that grows to 7-10m in maturity. It flourishes in full sun or light shade, can withstand most soil types and has the added advantages of being wind and drought resistant.

The large shrub offers interest throughout the seasons, being early into leaf with large three lobed glossy green leaves and producing yellow-white fragrant flowers in May, to turning to a bright red / orange in Autumn.

Plant Profile

Name: *Acer ginnala*

Common Name: Amur Maple

Family: Sapindaceae

Height: 7-10 metres

Width: 4-8 metres

Demands:

Soil: Moist but well-drained, Chalk, Clay, Sand or Loam soil
