

Aesculus parviflora

Bottlebrush buckeye / Dwarf buckeye

Aesculus parviflora 3-3.5m Multi stem Umbrella

Aesculus parviflora is commonly known as the Dwarf Buckeye or Dwarf bottlebrush. A species of suckering deciduous shrub, native to open woodlands of the south eastern United States.

The leaves are arranged in opposite pairs, palmately compound with 5-7 leaflets.

These open bronze then fade to dark green, before turning yellow in the Autumn.

The flowers are produced in erect panicles 20-30cm long with small white petals and are followed by smooth fruits.
