

Betula ermanii

Erman's Birch / Golden Birch

Betula ermanii 20-25cm

Betula ermanii is a shallow rooting medium sized, hardy tree, sometime multi-stemmed, with peeling creamy-white bark on the trunk, papery brown bark on the branches. Coarsely toothed, conspicuously veined ovate leaves turn bright yellow in autumn; male catkins open with the leaves.

Attractive in all seasons, particularly so in winter, especially if set amongst dark evergreens. It has a broadly conical to oval crown which becomes increasingly rounded in maturity. There are many variations producing a variety of sizes as well as bark and colour.

Plant Profile

Name:	<i>Betula ermanii</i>
Common Name:	Erman's Birch
Family:	Betulaceae
Height:	up to above 6 metres
Width:	up to 4-6 metres
Demands:	Works well in any aspect, whether in a exposed or sheltered position, prefers full sun / partial shade
Soil:	All soils tolerated
Foliage:	Deciduous
Bark:	Papery Brown

Betula ermanii

Erman's Birch / Golden Birch

Deepdale

Birch sap is used in the manufacture of wine and beer in northern Europe, Russia and China.

Birch is known as a pioneer species because it easily populates habitats destroyed by fire
