

*Halesia carolina Multi Stem 4.5-5m*

*Halesia carolina* originated from the south-east United States with a broad rounded crown and is a lovely spreading tree up to 10m tall.

Its mid-green elliptic to ovate-oblong leaves are 5-10cm long with a finely tapered point and turn yellow in autumn.

In mid to late spring as the leaves appear, clusters of delicately scented white or creamy pink 3cm flowers like bells on slender stalks emerge.

The fruits of the tree which appear in the Autumn are not decorative but do add interest. They are yellowish green 2-3.5cm oblong capsules with four curious papery wings and a slender 'beak' on the end.

## **Plant Profile**

<b>Name:</b>	Malus <i>Halesia carolina</i>
<b>Common Name:</b>	Carolina silverbell / Snowdrop tree
<b>Family:</b>	Styracaceae
<b>Height:</b>	8 to 10 metres
<b>Width:</b>	4 to 8 metres
<b>Demands:</b>	Full sun to partial shade in any aspect
<b>Soil:</b>	Well drained loam, clay, or sand
<b>Foliage:</b>	Deciduous
<b>Flowers:</b>	White / Pale pink

*Halesia carolina Multi Stem 1.75-2m*

## ***Halesia carolina***

*Carolina silverbell / Snowdrop tree*

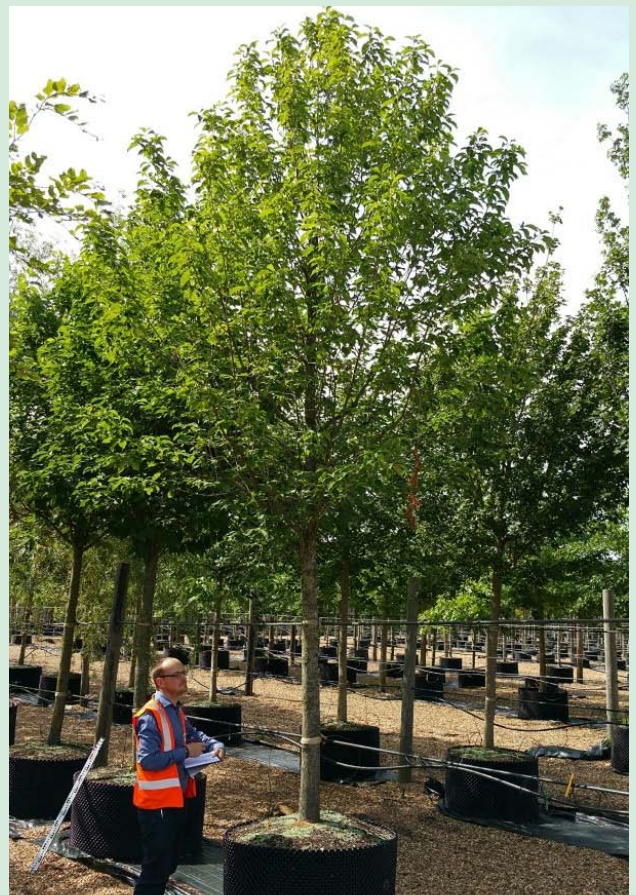

Squirrels use Carolina silver bells for food and the trees for dens. It's heavy flowering in spring and very attractive for the bees. Beekeepers speak highly of the species as an outstanding source for honey.

*Halesia carolina* Multi stem 3.5-4m

*Halesia carolina* Umbrella 3-4m

*Halesia carolina* Standard 30-35cm girth
