

Sorbus commixta Dodong

Japanese Rowan

Sorbus commixta Dodong leaves and berries

Sorbus commixta Dodong, also known as *Sorbus commixta Olympic Flame* is native of South Korea and Japan. It was initially brought to the UK during the 1880s and has become a popular cultivar ever since.

A mass of creamy white flowers appear in spring set amongst bronze - green pinnate leaves, followed by an abundance of glossy orange / red berries which look especially exquisite on the background of lush green foliage. The leaves then turn to a fantastic fiery orange - red inspiring the name 'Olympic Flame.'

The *Sorbus commixta Dodong* maintains a neat, slender profile making it a suitable tree for avenues, street planting and any sized garden.

Plant Profile

Name: *Sorbus commixta Dodong*

Common Name: Japanese Rowan

Family: Rosaceae

Height: 9.0-12.0m

Width: 4.0-8.0m

Demands: Sheltered, full sun or partial shade, all facing aspect

Soil: Moist but well-drained, Sand, Clay and Loam.
