

Viburnum x burkwoodii

Burkwood Viburnum

Viburnum burkwoodii 1.5-2.0m WRB

Viburnum x burkwoodii is a hybrid of *Viburnum utile* and *Viburnum carlesii* pollinated by Burkwood Nursery in Skipworth, England in 1924. The *Viburnum x burkwoodii* is a semi-evergreen shrub, with large dark glossy green ovate leaves on stiff stems.

The shrub is small in size, with an open spreading habit that will reach a maximum 3.0m in height. Making them a brilliant shrub for those smaller gardens looking for an evergreen specimen.

The *Viburnum x burkwoodii* offers domed clusters of intoxicatingly fragrant white flowers that bloom in April and May. Following the fragrant white blossom are the red berries, that create a lovely colour contrast with the dark glossy leaves.
